

Exp No: 6- ARDUINO TO 16x2 LCD DISPLAY USING PROTEUS

Objectives:

1. To interface a 16×2 LCD display with the Arduino UNO.
2. To display text and data on a 16×2 LCD display.
3. To understand LCD interfacing and display control using Arduino.

Program:

Arduino to 16x2 LCD Display using Proteus

```
#include <LiquidCrystal.h>
```

```
LiquidCrystal lcd (7, 8, 9, 10, 11, 12);
```

```
// your PWM numbers may be different
```

```
void setup() {
```

```
  lcd.begin(16, 2);
```

```
  lcd.print("put your message here");
```

```
}
```

```
void loop () {
```

```
  for (int i=0; i<13; i++)
```

```
  {
```

```
    lcd.scrollDisplayLeft();
```

```
    delay(700);
```

```
  }
```

```
}
```

Output:
